

CRETE-OFF

TECHNICAL DATA SHEET

CONCRETE DISSOLVER

HOW TO USE

Instructions - Tool and Equipment Cleaning

There are some simple guidelines to follow when using Crete Off Concrete Dissolver to clean any unwanted concrete off a surface.

- It is neutralized by water, so do not wet tools or equipment first.
- If you are cleaning equipment on concrete, cover or wet it down first.
- Always allow 10 to 15 minutes of continual soaking by the product.
- After a good soaking with Crete Off use a stiff nylon brush and water.
- The thickness of material will dictate if a second treatment is required.
- A sprayer with a wand is a very effective applicator.
- Some tools can be soaked in trays for 30 minutes or so.
- After using the stiff brush, wash off with a hose or pressure washer.

Though Crete Off is a nontoxic, biodegradable product and will not harm your skin we always recommend that you wear protective gloves and eye protection. Fumes are minimal
